Mandarin, Guoyu or Putonghua? 'Chinese' is a language known by many names, and China is a country home to many languages. Since the turn of the twentieth century linguists and politicians have been on a mission to create a common language for China. From the radical intellectuals of the May Fourth Movement, to leaders such as Chiang Kai-shek and Mao Zedong, all fought linguistic wars to push the boundaries of language reform. Now, Internet users take the Chinese language in new and unpredictable directions. David Moser tells the remarkable story of China's language unification agenda and its controversial relationship with modern politics, challenging our conceptions of what it means to speak and be Chinese. 'If you want to know what the language situation of China is on the ground and in the trenches, and you only have time to read one book, this is it. A veritable tour de force, in just a little over a hundred pages, David Moser has filled this brilliant volume with linguistic, political, historical, and cultural data that are both reliable and enlightening. Written with captivating wit and exacting expertise, A Billion Voices is a masterpiece of clear thinking and incisive exposition.' Victor H. Mair, American sinologist, professor of Chinese language and literature at the University of Pennsylvania and author of The Columbia History of Chinese Literature 'David Moser explains the complex aspects of Putonghua against the backdrop of history, delivering the information with authority and simplicity in a style accessible both to speakers of Chinese and those who are simply fascinated by the language. All of the questions that people have asked me about Chinese over the years, and more, are answered in this book. The history of Putonghua and the vital importance of creating a common language is a story David Moser brings to life in an enjoyable way.' Laszlo Montgomery, The China History Podcast

As a young child, Jonathan Watts believed if everyone in China jumped at the same time, the earth would be shaken off its axis, annihilating mankind. Now, more than thirty years later, as a correspondent for The Guardian in Beijing, he

has discovered it is not only foolish little boys who dread a planet-shaking leap by the world ' s most populous nation. When a Billion Chinese Jump is a road journey into the future of our species. Traveling from the mountains of Tibet to the deserts of Inner Mongolia via the Silk Road, tiger farms, cancer villages, weather-modifying bases, and eco-cities, Watts chronicles the environmental impact of economic growth with a series of gripping stories from the country on the front line of global development. He talks to nomads and philosophers, entrepreneurs and scientists, rural farmers and urban consumers, examining how individuals are trying to adapt to one of the most spectacular bursts of change in human history, then poses a question that will affect all of our lives: Can China find a new way forward or is this giant nation doomed to magnify the mistakes that have already taken humanity to the brink of disaster?

This book gives an overview and discussion of the languages and peoples of China. The emphasis of this book is on Putonghua (i.e., Common Speech) which is the most wide spread varieties of the Chinese languages. It also provides discussions on other major dialects related to Putonghua, as well as some of the minority languages that belong to other language families, such as Altaic and Austric. Typically a Chinese community is characterized by several forms of speech: a local vernacular, a regional standard, and also variants with these two overlaid by a variety of national standards. The book offers some insightful remarks on the endangered languages of China, which are the inevitable victims of globalization. This observation is given an in-depth coverage on both the spoken languages, distinguished by their lexical tones, and written languages, well-known for their morphosyllabic orthography. This orthography has the unique distinction of being the oldest one currently in use in the world.

Called "the world's conscience" and one of the 100 most influential people of our time by Time magazine, Jan Egeland has been the public face of the United Nations. As Undersecretary-General for Humanitarian Affairs, he was in charge of the Office for the Coordination of Humanitarian Affairs (OCHA) for three and a half years. One of the bravest and most adventuresome figures on the international scene, Egeland takes us to the frontlines of war and chaos in Iraq, to scenes of ethnic cleansing in Darfur, to the ground zeroes of famine, earthquakes, and tsunamis. He challenges the first world to act. A Billion Lives is his on-the-ground account of his work in the most dangerous places in the world, where he has led relief efforts, negotiated truces with warlords, and intervened in what many had thought to be hopeless situations. As one of Secretary-General Kofi Annan's closest advisers, Jan Egeland was at the heart of crises during a difficult period in UN history, when the organization was plagued by the divisive aftermath of the Iraq war, the Oil-for-Food scandal, and terror attacks against UN workers. On the day Egeland came to New York to take up his job, the UN building in Baghdad was destroyed by a huge bomb, killing one of his predecessors, Sergio de Mello. Two months later Annan sent Egeland to Iraq to judge whether the UN could keep a presence there. Since that first mission to Baghdad, Egeland has been envoy to such places as Darfur, Eastern Congo, Lebanon, Gaza, Northern Israel, Northern Uganda, and Colombia. He coordinated the massive international relief efforts after the Indian Ocean tsunami and South Asian earthquake. As a negotiator and activist, Egeland is famous for direct language, whether he's addressing warlords, guerrilla leaders, generals, or heads of state. A Billion Lives is his passionate, adventure-filled eyewitness account of the catastrophes the world faces. And so Egeland writes that he has met the best and worst among us, has "confronted warlords, mass murderers, and tyrants, but [has] met many more peacemakers, relief workers, and human rights activists who risk their lives at humanity's first line of defense." In spite of the desperate need of so many, Egeland is convinced that, "For the vast majority of people, the world is getting better, that there is more peace, more people fed and educated, and fewer forced to become refugees than a generation ago. So there is reason for optimism," he concludes in this groundbreaking book that does not flinch but holds out reasons for hope.

How RFID, a ubiquitous but often invisible mobile technology, identifies tens of billions of objects as they move through the world. RFID (Radio Frequency Identification) is ubiquitous but often invisible, a mobile technology used by more people more often than any flashy smartphone app. RFID systems use radio waves to communicate identifying information, transmitting data from a tag that carries data to a reader that accesses the data. RFID tags can be found in credit cards, passports, key fobs, car windshields, subway passes, consumer electronics, tunnel walls, and even human and animal bodies—identifying tens of billions of objects as they move through the world. In this book, Jordan Frith looks at RFID technology and its social impact, bringing into focus a technology that was designed not to be noticed. RFID, with its ability to collect unique information about almost any material object, has been hyped as the most important identification technology since the bar code, the linchpin of the Internet of Things—and also seen (by some evangelical Christians) as a harbinger of the end times. Frith views RFID as an infrastructure of identification that simultaneously functions as an infrastructure of communication. He uses RFID to examine such larger issues as big data, privacy, and surveillance, giving specificity to debates about societal trends. Frith describes how RFID can monitor hand washing in hospitals, change supply chain logistics, communicate wine vintages, and identify rescued pets. He offers an accessible explanation of the technology, looks at privacy concerns, and pushes back against alarmist accounts that exaggerate RFID's capabilities. The increasingly granular practices of identification enabled by RFID and other identification technologies, Frith argues, have become essential to the working of contemporary networks, reshaping the ways we use information.

What does it take to reinvent a language? After a meteoric rise, China today is one of the world ' s most powerful nations. Just a century ago, it was a crumbling empire with literacy reserved for the elite few, as the world underwent a massive technological transformation that threatened to leave them behind. In Kingdom of Characters, Jing Tsu argues that China ' s most daunting challenge was a linguistic one: the century-long fight to make the formidable Chinese language accessible to the modern world of global trade and digital technology. Kingdom of Characters follows the bold innovators who reinvented the Chinese language, among them an exiled reformer who risked a death sentence to advocate for Mandarin as a national language, a Chinese-Muslim poet who laid the groundwork for Chairman Mao's phonetic writing system, and a computer engineer who devised input codes for Chinese characters on the lid of a teacup from the floor of a jail cell. Without their advances, China might never have become the dominating force we know today. With larger-than-life characters and an unexpected perspective on the major events of China ' s tumultuous twentieth century, Tsu reveals how language is both a technology to be perfected and a subtle, yet potent, power to be exercised and expanded.

Pulitzer Prize-winning journalists Mark Johnson and Kathleen Gallagher chronicle the story of Nic Volker, the Wisconsin boy at the center of a daring breakthrough in medicine--a complete gene sequencing to discover the cure for an otherwise undiagnosable illness. At just two years old, Nic experienced a searing pain that signaled the awakening of a new and deadly disease. For years, through false starts and failed cures, Nic holds on to life, buoyed up by his mother's fierce drive to get him the care he needs. But when even the world's experts are stumped by Nic's illness, his doctors come up with a radical, long-shot plan: a step into the unknown. The next major scientific frontier, following the completion of the Human Genome Project, was to figure out how to use our new knowledge to save lives--to bring genomic or personalized medicine into reality. The quest is undertaken by researchers around the world, but it is only when geneticist Howard Jacob hears about young Nic that the finish line finally comes into sight: It's no longer a race to make history. It's a race to save this boy's life.--Adapted from dust jacket.

From the author of Earth! My First 4.54 Billion Years comes a new picture book about space— this time starring our Sun! Meet Sun: He's a star! And not just any star—he's one in a billion. He lights up our solar system and makes life possible. With characteristic humor and charm, Stacy McAnulty channels the voice of Sun in this next celestial "autobiography." Rich with kid-friendly facts and beautifully illustrated, Sun! One in a Billion is an equally charming and
