to the fuel rail and engine. On the other end it is connected to the air intake.

## ~~How to Adjust the Idle on a Hyundai | It Still Runs~~

Tip: The idle screw almost always has a Phillips head. If you see a nearby flathead screw, this is typically the air intake screw. While turning the air intake screw can be used to adjust the idle speed, this screw also controls the air flow when you're actively riding. As a consequence, it's generally not a good idea to mess with this screw.

## ~~Simple Ways to Adjust Idle on a Motorcycle: 10 Steps~~

Turn the idle screw, now exposed from the protective rubber coating, in order to adjust the idle. Loosen the screw in a counter-clockwise fashion to increase idle speed or tighten it in a clockwise manner in order to decrease the idle speed. Ideally, you will want the idle to rest at 650 RPM.

## ~~How to Adjust a Car Idle | It Still Runs~~

Homelite Chainsaw Idle Adjustment Set the idle speed screw by adjusting the screw marked 'T.' If the chainsaw starts and runs without idling, turn the screw clockwise to increase the idle speed. If the chain moves while the chainsaw is idling, turn the screw counterclockwise instead.
