When you're reading a book, what pulls you in? Is it the Magic U? Duncan Youze sneaks outside at night to look for "a Magic U that makes your bestest wish come true." His big sister Holly follows to keep him out of trouble. But a stranger chases them from the playground into the woods where they discover a writer's cottage and a secret passage. When the stranger returns, Holly and Duncan open a door and take off on a wild flight of imagination into one fantastic world after another... A beefy boy who can fly. A rainbow-stabbing rabbit. A wolf in ewe's clothing. Two lost dinosaurs. A realm of stuffed animals ruled by an articulate infant princess wise beyond her months. These are just a few of the many characters Holly and Duncan meet as they flee the stranger through a maze of amazing worlds. But will they ever find their way home? Anything can happen in The Magic U... Open a door, open a book, and see.

Computing devices have become ever more present in our everyday environments, however embedding these technologies into our routines has remained a challenge. This book explores the novel theory of peripheral interaction to rectify this. This theory examines how interactive systems can be developed in such a way to allow people to seamlessly interact with their computer devices, but only focus on them at relevant times, building on the way in which people effortlessly divide their attention over several everyday activities in day to day life. Capturing the current state of the art within the field, this book explores the history and foundational theories of peripheral interaction, discusses novel interactive styles suitable for peripheral interaction, addresses different application domains which can benefit from peripheral interaction and presents visions of how these developments can have a positive impact on our future lives. As such, this book's aim is to contribute to research and practice in fields such as human-computer interaction, ubiquitous computing and Internet of Things, a view on how interactive technology could be redesigned to form a meaningful, yet unobtrusive part of people's everyday lives. Peripheral Interaction will be highly beneficial to researchers and designers alike in areas such as HCI, Ergonomics and Interaction Design.

Davie Jones—an ugly duckling growing up in small-town Mississippi with a mother who couldn't get any meaner—is positive her life couldn't be any worse. Just when she's resigned herself to her fate, she sees a movie that will change her life—Sixteen Candles. But in her case, life doesn't imitate art. Tormented in school and hopelessly in unrequited love with a handsome football player, Davie finds it bittersweet to dream of Molly Ringwald endings. When a cruel school prank goes too far, Davie leaves the life she knows and reinvents herself in the glittery world of Hollywood—as a beautiful and successful lounge singer. Just as

she's about to ride off into the L.A. sunset, the past comes back with a vengeance, threatening to crush Davie's dreams—and break her heart again. With wholly original characters and a cinematic storyline, 32 Candles introduces Ernessa T. Carter, a new voice in fiction with smarts, attitude, and sassiness to spare.
