“BAT*21” is the kind of lean, no-nonsense war film Hollywood used to make back before the subject became burdened with metaphysical insights. It's the story of a middle-aged Air Force colonel's attempt to survive behind enemy lines, where he has no business being in the first place, and about how a stubborn spotter pilot returns time and again in a light aircraft to keep his spirits up.

the Vietnam War. After twenty-five years of official secrecy, the story of that dangerous and costly rescue is revealed by a decorated Air Force pilot and Vietnam veteran. Involving personnel from all services, including the Coast Guard, the unorthodox rescue operation claimed the lives of eleven soldiers and airmen, destroyed or damaged several aircraft, and put hundreds of airmen, a secret commando unit, and a South Vietnamese infantry division at risk. It also examines the thorny debates arising from an operation that balanced one man's life against mounting U.S. and South Vietnamese casualties and material losses, the operation's impact on one of the most critical

battles of the war, and the role played by search and rescue as America disengaged from that war.

The untold story of the most important rescue mission not just of the Vietnam War, but the entire Cold War: one American aviator, who knew our most important secrets, crashed behind enemy lines and risked capture by both the North Vietnamese and the Soviets. One Navy SEAL and his Vietnamese partner had to sneak past them all to save him. At the height of the Vietnam War, few American airmen are more valuable than Lt. Colonel Gene Hambleton. His memory is filled with highly classified information that the

Soviets and North Vietnamese badly want. When Hambleton is shot down in the midst of North Vietnam's Easter Offensive, US forces place the entire war on hold to save a single man hiding amongst 30,000 enemy troops and tanks. Airborne rescue missions fail, killing eleven Americans. Finally, Navy SEAL Thomas Norris and his Vietnamese guide, Nguyen Van Kiet, volunteer to go after him on foot. Gliding past hundreds of enemy soldiers, it takes them days to reach Hambleton, who, guided toward his rescuers via improvised radio code, is barely alive, deeply malnourished, and hallucinating after eleven days on the run. In this deeply-researched, untold story, award-winning author

Stephan Talty describes the extraordinary mission that led Hambleton to safety. Drawing from dozens of interviews and access to unpublished papers, Saving Bravo is the riveting story of one of the greatest rescue missions in the history of the Special Forces.

Bats display astonishing ecological and evolutionary diversity and serve as important models for studies of a wide variety of topics, including food webs, biogeography, and

emerging diseases. In *Bat Ecology*, world-renowned bat scholars present an up-to-date, comprehensive, and authoritative review of this ongoing research. The first part of the book covers the life history and behavioral ecology of bats, from migration to sperm competition and natural selection. The next section focuses on functional ecology, including ecomorphology, feeding, and physiology. In the third section, contributors explore macroecological issues such as the evolution of ecological diversity, range size, and infectious diseases (including rabies) in bats. A final chapter discusses conservation challenges facing these fascinating flying mammals.

Bat-21 is the minute-by-minute recreation of Air Force Lt. Colonel Iceal Hambleton's 12-day entrapment in the enemy-infested jungle of Vietnam. Ties in to the March '88 Dino DeLaurentis film, directed by Peter Markel and starring Gene Hackman and Danny Glover.

On Easter Sunday, 2 April 1972,

Online Library Bat 21

Lt Col Iceal "Gene" Hambleton was shot down just South of the demilitarized zone in Vietnam. Six days of massive effort to extract him with conventional air rescue forces failed. For five more days, he evaded the enemy on a course relayed to him in the disguise of golf course holes. His saga ended with a daring special forces rescue, but also with an enormous cost in men and material. These events, their cost, and the lessons learned from them are all detailed in this case study. The case study is built on official documents and publications, plus an oral history interview with Colonel Hambleton. The lessons learned range from individual preparation, to the requirement for better

Online Library Bat 21

aircraft capabilities, and the need for better decision making processes for the combat search and rescue mission. A review of current rescue concepts is undertaken and compared to the historical context of Hambleton's incident. Observations are made that mission and capability may be mismatched at present, and that conventional search and rescue task force operations may be prohibited by future battlefield environments. A review of both the book and file made about Colonel Hambleton's story is appended, as is a transcript of the above mentioned interview.
