With visual symptoms occurring in 50-90 percent of workers using computers, this practical guide details careful diagnosis and treatment of visual conditions that can cause visual syndromes. This book provides the knowledge, references, materials, and action plans designed to help practitioners diagnose and manage computer-related vision disorders. It addresses the visual and environmental factors that cause the visual problems experienced by computer users, offering practical suggestions for assessing the visual ergonomics of a patient's computer workstation and reducing the visual demands of a task. Serves as a readable and practical "how-to" guide to computer-related visual problems that guides the reader in diagnosing and treating computer-related visual disorders. In-depth coverage addresses both the common visual problems and the environmental factors that cause them. Action plans in each chapter suggest activities for implementing and applying strategies in the workplace. A chapter on positioning the practice provides information on how to expand clinical practice into the area of caring for computer-users and improve patient satisfaction. A chapter on marketing provides the tools needed to bring new patients into the reader's practice and expand the patient base. Exercises and hand-out materials designed for patient education encourage patient compliance with treatment guidelines. Up-to-date information on various research studies and notes discusses the evidence-based rationales behind effective practice. Information on lens products provides information on prescribing lenses designed for computer use. Discussions of computer-simulation instruments provides information on the purchase and use of computer simulation instruments.

Computer Hardware: Installation, Interfacing, Troubleshooting and Maintenance is a comprehensive and well-organised book that provides sufficient guidelines and proper directions for assembling and upgrading the computer systems, interfacing the computers with peripheral devices as well as for installing the new devices. Apart from this, the book also covers various preventive and corrective steps required for the regular maintenance of computer system as well as the steps that are to be followed for troubleshooting. The text highlights different specification parameters associated with the computer and its peripherals. Also, an understanding of the technical jargon is conveyed by this book. Special coverage of laptops, printers and scanners makes this book highly modernised. The book is designed with a practice-oriented approach supported with sufficient photographs and it covers even the minute aspects of the concepts. Following a simple and engaging style, this book is designed for the undergraduate students of Computer Science and Computer Maintenance. In addition to this, the book is also very useful for the students pursuing Diploma courses in Computer Engineering, Hardware and Troubleshooting as well as for the students of Postgraduate Diploma in Hardware Technology and Application. Key Features • Quick and easy approach to learn the theoretical concepts and practical skills related with the computer hardware. • Comprehensive with enough illustrations to facilitate an easy understanding. • Detailed solutions provided by the experts for certain common problems to make better interaction with the learner. • An exclusive section Common Problems and Solutions to help in self resolving the general hardware related issues.

The papers in this volume comprise the refereed proceedings of the the First International Conference on Computer and Computing Technologies in Ag- culture (CCTA 2007), in Wuyishan, China, 2007. This conference is organized by China Agricultural University, Chinese Society of Agricultural Engineering and the Beijing Society for Information Technology in Agriculture. The purpose of this conference is to facilitate the communication and cooperation between institutions and researchers on theories, methods and implementation of computer science and information technology. By researching information technology development and the - sources integration in rural areas in China, an innovative and effective approach is expected to be explored to promote the technology application to the development of modern agriculture and contribute to the construction of new countryside. The rapid development of information technology has induced substantial changes and impact on the development of China's rural areas. Western thoughts have exerted great impact on studies of Chinese information technology devel- ment and it helps more Chinese and western scholars to expand their studies in this academic and application area. Thus, this conference, with works by many prominent scholars, has covered computer science and technology and information development in China's rural areas; and probed into all the important issues and the newest research topics, such as Agricultural Decision Support System and Expert System, GIS, GPS, RS and Precision Farming, CT applications in Rural Area, Agricultural System Simulation, Evolutionary Computing, etc.
