Phylogenetics is the study of evolutionary relationships among biological entities - often species, individuals or genes (which may be referred to as taxa). The major elements of phylogenetics are summarised in Figure 1 below. Figure 1 Elements of phylogenetics. Typically phylogeneticists study one of the following types of question: • What are the evolutionary relationships or histories ...

Cultural artefacts, like genes and languages, reflect their history. The methodology of inference of that history, however, has been a contentious question. Recent applications of biological phylogenetic methodology to infer historical patterns of material culture are often explicitly justified on the grounds that essentially similar processes underlie evolution in both biological and material ...
