~~Classic C doesn't use camel-case; I've written code in camel-case in C, and it looks weird (so I don't do it like that any more). That said, it isn't wrong - and consistency is more important than which convention is used. Avoid typedefs that encapsulate structure pointers; consider the C standard - 'FILE *' is spelled thus, not FILE_PTR.~~

~~Thus a device with the numbering code 1N4148 is a diode and a 2N706 is a bipolar transistor. Sometimes extra letters are added to the part number and these often refer to refer to the manufacturer. M means the manufacturer is Motorola, while TI means Texas Instruments, although an A added to the part number often means a revision of the ...~~

The CE Marking Directive amended both of these directives. Taken together, they govern the conformity assessment procedures that the manufacturer, the authorised representative or the importer into the EU/EEA must comply with to affix the required CE mark to the equipment, the user documentation, or the packaging.

Devices that are intended to be used for medical purposes are likely to be required to be CE marked under the Medical Devices Directive (93/42/EEC, as amended), however it is important to note that not everything found in a hospital or in a healthcare setting will fall within scope. Only devices or accessories of such devices that fulfil a specific definition can be CE marked.

CE Marking Electrical Equipment Electrical equipment that is being sold in the UK and Europe is required to be CE Marked under the Low Voltage Directive (typically shortened to 'LVD'). The Directive applies to electrical equipment that operates between 50 to 1000 volts for alternating current or 75 to 1500 volts for direct current and applies to new equipment that is being placed on the market for the first time.
