elementary forms of learning that have been the focus of research for much of the twentieth century: habituation, classical conditioning, instrumental conditioning, stimulus control, aversive control, and their applications to the study of cognition and to the alleviation of behavior problems. Biological constraints on learning are integrated throughout the text, as are applications boxes that relate animal research to human learning and behavior. The book is organized so that each chapter builds on the previous one, and simpler phenomena (habituation and sensitization) are described before more complicated ones. Within each chapter, information is also presented in increasing order of complexity. Throughout, analogies and examples help simplify and clarify concepts.

and human research, the book is known for its scholarship and easy-to-read style, and the introduction of concepts and theories within the framework of highly effective pedagogical elements, the new edition has been updated and reorganized into twelve chapters to reflect recent changes in the field.

The Reason for this Volume If we were to judge the seriousness of a psychosocial problem by the attention that the popular media give to it, we would have to conclude that the modern world is in the midst of an epidemic of pedophilic child sexual abuse. One can scarcely go more than a few weeks in any large metropolitan area without reading about one of the community's upstanding citizens discovered to have been sexually involved with children or adolescents. The attention that the popular media give this topic is

Read PDF Domjan Burkhards Principles

paralleled by the attention that it receives in the social sciences, where literally dozens of books and more than a thousand articles have been published on it in the past few years. In fact, "child sexual abuse," along with "co-dependency" and "dysfunctional family," have become the avant-garde psychological clichés of the decade. However, most of the lay and professional literature, although voluminous, reflect a narrow anthropo-, ethno-, and chronocentrism that precludes any real understanding of the topic with anything more than the preconceptions of our times.

First published in 1984. Routledge is an imprint of Taylor & Francis, an informa company.

Learning, Behavior, and Sequential Behavior: Behavioral, Biological, and Computational Perspectives brings together psychologists studying cognitive skill in animal and human subjects, connectionist theorists, and neuroscientists who have a common interest in understanding function and dysfunction in the realm of complex cognitive behavior. In this volume, discussion focuses on behavioral, cognitive, psychobiological, and computational approaches to understanding the integration of ongoing behavior, with particular attention to models of timing and the organization of sequential behavior.

How do animals perceive the world, learn, remember, search for food or mates, communicate, and find their way around? Do any nonhuman animals count, imitate one another, use a language, or have a

Learning Behavior
culture? What are the uses of cognition in nature and how might it have evolved? What is the current status of Darwin's claim that other species share the same "mental powers" as humans, but to different degrees? In this completely revised second edition of *Cognition, Evolution, and Behavior*, Sara Shettleworth addresses these questions, among others, by integrating findings from psychology, behavioral ecology, and ethology in a unique and wide-ranging synthesis of theory and research on animal cognition, in the broadest sense--from species-specific adaptations of vision in fish and associative learning in rats to discussions of theory of mind in chimpanzees, dogs, and ravens. She reviews the latest research on topics such as episodic memory, metacognition, and cooperation and other-regarding behavior in animals, as well as recent theories about

Learning Behavior

what makes human cognition unique. In every part of this new edition, Shettleworth incorporates findings and theoretical approaches that have emerged since the first edition was published in 1998. The chapters are now organized into three sections: Fundamental Mechanisms (perception, learning, categorization, memory), Physical Cognition (space, time, number, physical causation), and Social Cognition (social knowledge, social learning, communication). Shettleworth has also added new chapters on evolution and the brain and on numerical cognition, and a new chapter on physical causation that integrates theories of instrumental behavior with discussions of foraging, planning, and tool using.
