Embryology questions (practice) | Cells | Khan Academy

What is gametogenesis? Meiosis is the type of cell division that allows sexual reproduction, since it reduces the number of chromosomes of the species to a half, making the combination of two gametes to form a new individual possible. (In some organisms, meiosis creates haploid gametophytes that by means of mitosis generate gametes.

Gametogenesis - Biology Questions

List of general and human embryology question and answers for medical students! Embryology Question # Q. 1. What do you mean by Gametogenesis? Ans. Gametogenesis is the first phase in the sexual reproduction of animals. The essential process during this phase is the transformation of certain cells in the parents into specialized cells: the eggs, or ova, in the female and the spermatozoa in the male (or in the female and male organs in hermaphroditic animals).

Embryology Question Bank: [For Medical Students]

Gametogenesis is the process whereby a haploid cell (n) is formed from a diploid cell (2n) through meiosis and cell differentiation. Gametogenesis in the male is known as spermatogenesis and produces spermatozoa. Gametogenesis in the female is known as oogenesis and result in the formation of ova. In this article we shall look at both spermatogenesis and oogenesis.

Gametogenesis - Spermatogenesis - Oogenesis ...

Abnormal Gametogenesis. Pathological processes during spermatogenesis and oogenesis are primarily relevant at the chromosomal level. An example of disturbed gametogenesis is non-disjunction, the incorrect segregation of chromosomes into gametes. It can occur in the course of the first and second meiotic divisions and leads to gametes with too many or too few chromosomes.
