How we care for epilepsy. Most children with epilepsy can achieve good seizure control with treatment, and some can live seizure-free. Treatments for epilepsy have expanded greatly in recent years to include many new medications, specialized diets and a wide range of surgical strategies. A new technique, noninvasive brain stimulation, is also being studied.

Care Delivery for Children With Epilepsy During the COVID ...

Pediatric epilepsy surgery can be used to treat a highly selected group of patients whose seizures are not controllable by standard means.; The appropriate candidate for epilepsy surgery must meet several criteria.; There are currently three major categories of epilepsy surgery: resective surgery, corpus callosotomy, and implantation of the vagus nerve stimulator.

Pediatric Epilepsy Surgery: Temporal Lobe, Resective, Recovery

Epilepsy is the most common childhood brain disorder in the United States. Nearly 3 million people have been diagnosed with this disease, while 450,000 of them are under the age of 17. Fortunately, two thirds of the child population will overcome the side effects, most notably, seizures, through treatment during adolescence. Epilepsy affects all ages groups. But for children, a variety of issues exist that can affect one's childhood. Seizures are defined as 'a transient occurrence of signs and s

Epilepsy in children - Wikipedia

Depression and anxiety are the most prevalent psychiatric disorders in adults with epilepsy (1-4).They affect quality of life (5, 6) and how patients respond to poor seizure control ().Nevertheless, most cases of depression go undiagnosed and untreated in these patients [See review in Barry, 2000 ()].In terms of the underlying mechanisms, seizure-related variables, such as seizure frequency ...

Epilepsy is a chronic disease characterized by recurrent unprovoked seizures. In 2015, there were an estimated 470,000 children in the United States who were considered to have active epilepsy.¹ And while most children with epilepsy become seizure-free with their first trial of an anticonvulsant medication, up to 30% of children are refractory or treatment-resistant to standard anticonvulsant ...

Cannabis and Pediatric Epilepsy - CRx Magazine - Summer 2020

Summary: Purpose: We assessed rates of symptoms of anxiety and depression among pediatric patients with epilepsy. Methods: We administered the Revised Child Manifest Anxiety Scale (RCMAS), and Child Depression Inventory (CDI) to 44 epilepsy patients aged 7-18 years (mean age 12.4 years). Demographic, socioeconomic, and epilepsy-related information was examined in relation to depression and ...
