In response to the forecasts for growth in refining, the worldwide impact of environmental regulations, and the increasing demand for certain product classes, this second edition has been completely updated to discuss the technological, pollution control, and economic aspects of nearly sixty major processes, including: alkylation and polymerization; base aromatic production processes; catalytic cracking; dehydrogenation, gasification and hydrogen production; hydro-cracking; hydro-treating ...

Handbook of petroleum refining. James G. Speight. Petroleum refining involves refining crude petroleum as well as producing raw materials for the petrochemical industry. This book covers current refinery processes and process-types that are likely to come on-stream during the next three to five decades. The book includes (1) comparisons of conventional feedstocks with heavy oil, tar sand bitumen, and bio-feedstocks; (2) properties and refinability of the various feedstocks; (3) thermal ...

Petroleum refining is a technology that uses fossil fuels as raw materials and chemical catalysts as a means to achieve conversion of petroleum through once, twice, and deep processing to get a series of chemical products, which are further used as the basic raw materials for synthetic fibers, synthetic rubber, plastics, chemical fertilizers and pesticides production. With the gradual depletion of oil resources, the fossil economy is facing serious challenges.

Handbook of Petroleum Refining Processes, Fourth Edition ...

This fully revised resource presents the latest technologies and processes for petroleum refining from the world's leading producers. Handbook of Petroleum Refining Processes has become a key reference in the chemical and petroleum engineering markets. The book is unique in that it presents licensable technologies for the refining of petroleum and production of environmentally acceptable fuels and petrochemical intermediates.
