## Air Cooled Engine

The ever-toughening emissions laws have many riders wondering when will air-cooled engines in brands such as Harley-Davidson come to a sad end. The good news, is it 's a long way off yet! That 's according to Harley-Davidson Motorcycle Product Portfolio director Peter Michael

The Harley-Davidson Milwaukee-Eight engine is the ninth generation of "big twin" engines developed by the company, but only Harley's third all-new Big Twin in 80 years, first introduced in 2016.

These engines differ from the traditional Harley Big Twin engines in that there are four valves per cylinder, totaling eight

# Access Free Harley

valves, hence the name.

motorcycle engines are exposed to extreme heat. In addition, because the engine is air-cooled, it tends to get even hotter if it stays idle due to a traffic jam. It can actually reach temperatures as high as 240 degrees Fahrenheit. The increased heat leads to a viscosity, which in turn influences the lubricity of the oil. In ...
