5. Prove that the following Lebesgue integrals exist: $\int_0^1 (x \log x)^2 dx$, $\int_0^1 \log x \log(1-x)^2 dx$, $\int_0^1 \frac{1}{1-x} \log x dx$.

Solution: The function $(x \log x)^2$ is continuous, hence measurable, and bounded between 0 and e^{-2} on $(0,1)$. Thus it is Lebesgue integrable on $[0,1]$ by Corollary 2 of Theorem 10.35 in the

[1.2.14] The same method works for all four parts. 1. Since $B = \int (f(1 ;] : 2Rg)$, it follows from Theorem 1.2.11 that X is measurable with respect to the right hand side (RHS), which hence also contains the left hand side (LHS).

can be regarded, in the simplest case, as the area between the graph of that function and the x-axis. The Lebesgue integral extends the integral to a larger class of functions. It also extends the domains on which these functions can be defined. Long before the 20th century, mathematicians already
