Long-acting contraceptives: implants and IUDs Long-acting contraceptives include progestogen (levonorgestrel) implants, and copper or levonorgestrel intrauterine devices (IUDs). These are the most effective forms of contraception and are recommended as a preferred option in patients who do not wish to become pregnant for a number of years, including those who are young or nulliparous.

~~Long acting contraceptives: implants and IUDs — bpaenz~~

A long-acting reversible contraceptive method. The implant is a small plastic tube that is about 4cm long and is inserted under the skin in your upper arm. The implant releases a hormone which stops the ovaries from releasing an egg. The implant prevents pregnancy for up to three years, and is over 99% effective.
