Across China: Joyous fervor crackles during Chinese Dragon Boat Festival

The night-time dragon boat race, native to Sanxi, is a unique custom of the Chinese Dragon Boat Festival, traditionally celebrated on the fifth day of the fifth month on the Chinese lunar calendar.

Lunar calendars suffer from an inherent uncertainty in the length of each month and the number of months in the year. Variable atmospheric conditions, weather and the acuity of the eye of an observer mean that the first sighting of the new moon crescent can never be known in advance. Calendars which rely on such observations to define the beginning of a new month therefore suffer from this lack of certainty as to whether a month will begin on a given day or the next. The papers in this volume address the question of how ancient and medieval societies lived with the uncertainties of a lunar calendar. How did lack of foreknowledge of the beginning of the month impact upon administration, the planning of festivals, and historical record keeping? Did societies replace the observation of the new moon crescent with schematic calendars or calendars based upon astronomical calculations and what were the ideological and practical consequences of such a change? The contributors to this volume address these topics from the perspectives of a variety of Ancient Near Eastern, Jewish, Ancient and Medieval European, Asian and American cultures.

This investigation is concerned with ancient Egyptian calendars. Its specific focus is one of the oldest problems of the study of these calendars: the so-called problem of the month names. This work's main purpose is to suggest an explanation for the Brugsch phenomenon. The Brugsch phenomenon is one of the two main aspects of the problem of the month names. The other is the Gardiner phenomenon. No new theory is presented for the Gardiner phenomenon. As a problem, the Brugsch phenomenon is slightly older than the Gardiner Phenomenon. It has occupied center stage in the study of ancient Egyptian calendars since the early days of this endeavor. In 1870, Heinrich Brugsch, the great pioneer in this subject, wrote about the phenomenon, "Here we encounter all at once the most curious contradiction." Just recently, Rolf Krauss has described the contradiction as still "unsolved". The Brugsch phenomenon concerns the indisputable fact that the last or twelfth month of the Egyptian civil year can be named as if it were the first. Two month names are involved. The first is wp rnpt. Its meaning "opener of the year," refers to a beginning. The second month name is mswt r' "birth of Re" in hieroglyphic Egyptian, Mesore in Aramaic, Greek and Coptic. Both can otherwise also refer to New Year's Day, the quintessential calendrical beginning.

This volume brings together both the elementary scientific facts that any lunar calendar formulation cannot ignore and a summary of the pressing scientific questions of particular interest to the Islamic calendar. Scientific aspects of the problem are thoroughly reviewed without prejudicing the argument in purely Islamic juridical questions and differences. The results are of great significance to both Islamic scholars and the general Muslim public. The papers presented are of a high scientific quality and are followed by a unanimous statement of the professional astronomers on the scientific questions. If these conclusions are followed, the varying sets of conventions used by different Islamic populations can be made self-consistent and free from scientific errors, even if they still differ from each other. This new edition allows the correction of errors in the first edition, makes the style more uniform among the papers, and improves the articles' graphs and figures. It aims to serve as an effective tool for addressing the calendrical issues that motivated the conference more than being merely a historical record. A new Afterword summarizes refinements in the scientific issues that have taken place in the ten years since the conference, many of which were prompted by the work presented here.

You won't find another calendar like this on Amazon. The planner you hold in your hand is a unique one. As one of the few on the market (if not the only one!) it takes into account the operation of less obvious forces that affect our efficiency and life. Such a power is undoubtedly the energy of the Moon, with which we women are particularly connected. In this calendar, the beginning of the month is

the New Moon. The week of the New Moon is preceded by a page with its symbol and date. This will let you know that a new lunar month is coming and it's time to reflect on your plans. You can start using the calendar as early as December 2020. Due to the fact that the new lunar month does not coincide with the beginning of the New Year, the first monthly period included in this calendar begins in December. The calendar is universal. It doesn't matter if you live in the USA or Great Britain. Only the main phases of the moon are marked in the calendar. Its moonrise and moonset times are not marked because the calendar can be used by women living in different countries. For this reason, these hours could differ depending on the user's place of residence. Everybody knows Full Moon is a unique, highly energetic time. It is especially emphasised every month. In the week it is performing, you will find a brief description and reflection to read for this special moment of the month. In every week you will find a "Workout for this week" field. It contains 7 fields to fill in and it is about physical exercises. You can enter your exercise plan for each day there. In the planner you will also find pages for planning your goals and controlling your personal development. Features: convenient 6"x9" size introduction to lunar phases energy weekly 2021 year planner each page contains patterns to color standard calendar overview circle of life exercise place to write down your goals, important dates and notes short reflection for each Full Moon time beautiful and artistic design This book will be your best companion for 2021.

This book traces the development of the Jewish calendar from its origin until it reached, in the tenth century CE, its present form. Drawing on a wide range of sources - literary, documentary and epigraphic; Jewish, Graeco-Roman and Christian - this is the first comprehensive book to have been written on this subject. The unification of the calendar is seen as an element in the unification of Jewish identity.

Long before astronomy was a science, humans used the stars to mark time, navigate, organize planting and dramatize myths. This encyclopaedia draws on archaeological evidence and oral traditions to reveal how prehistoric humans perceived the skies and celestial phenomena.
