Innovation is the driving force behind economic growth. The knowledge that f- ters innovation builds on both systematic research and serendipity. The availability of new knowledge—be it technological or organizational (social)—is, however, - suf?cient. An institutional structure must be in place that enhances mutual learning among the actors involved and that stimulates cooperation, as well as competition. This recognition has inspired this volume, which focuses on national innovation s- tems and sectoral (technology) innovation systems that differ widely between co- tries, due to their diverse historical paths and distinctive cultural and societal f- tures. With regard to theory, most chapters incorporate a mix of endogenous growth theory and evolutionary thinking. Endogenous growth theory places an emphasis on the interplay between technological knowledge and various structural charact- istics of the economy and society, as well as on the results of economic growth. Concepts related to technology development, accumulation of knowledge on te- nology, and technology diffusion feature prominently here. In evolutionary thi- ing, and in particular coevolutionary thinking, the focus is on close links between technology and institutions, whereby the functionality of technology is in?uenced by certain dynamic interactions with institutional systems. Information technology turns out to be a clear example of such a development.

During the last decades, soil organic carbon (SOC) attracted the attention of a much wider array of specialists beyond agriculture and soil science, as it was proven to be one of the most crucial components of the earth’s climate system, which has a great potential to be managed by humans. Soils as a carbon pool are one of the key factors in several Sustainable Development Goals, in particular Goal 15, “Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification and halt and reverse land degradation and halt biodiversity loss” with the SOC stock being explicitly cited in Indicator 15.3.1. This technical manual is the first attempt to gather, in a standardized format, the existing data on the impacts of the main soil management practices on SOC content in a wide array of environments, including the advantages, drawbacks and constraints. This manual presents different sustainable soil management (SSM) practices at different scales and in different contexts, supported by case studies that have been shown with quantitative data to have a positive effect on SOC stocks and successful experiences of SOC sequestration in practical field applications. Volume 3 includes a total of 49 practices that have a direct impact on SOC sequestration and maintenance in cropland, grassland, integrated systems and farming approaches.
