This book lays the foundations for an exciting new area of research in descriptive set theory. It develops a robust connection between two active topics: forcing and analytic equivalence relations. This in turn allows the authors to develop a generalization of classical Ramsey theory. Given an analytic

equivalence relation on a Polish space, can one find a large subset of the space on which it has a simple form? The book provides many positive and negative general answers to this question. The proofs feature proper forcing and Gandy – Harrington forcing, as well as partition arguments. The results include strong

canonization theorems for many classes of equivalence relations and sigma-ideals, as well as ergodicity results in cases where canonization theorems are impossible to achieve. Ideal for graduate students and researchers in set theory, the book provides a useful springboard for further research.

Ellsworth Kelly made the drawings reproduced in this volume in the Fall of 1954. Published for the first time in this sketchbook facsimile, these drawings offer a rare and special glimpse into the distinguished artist's working process at the dawn of his career. while riding a bus. Inspired by the shadows cast across the pages of a book, the artist took out his pencil and quickly recorded the outlines of the shadows directly onto the pages. Upon returning to his studio, Kelly reached for a sketchbook and began developing the sketches in ink, experimenting with variations, cropping
