Figure 6 A parallelogram with one angle specified. $m \angle A = m \angle C = 80^\circ$, because consecutive angles of a parallelogram are supplementary. $m \angle D = 100^\circ$, because opposite angles of a parallelogram are equal. $CD = 8$ and $AD = 4$, because opposite sides of a parallelogram are equal. Example 3: In Figure 7, find TR , QP , PS , TP , and PR .

Properties of Special Parallelograms

Special Properties of a Rectangle. Recall too that because a rectangle is a parallelogram, it has all the characteristics of a parallelogram. But it also has others: 1) All angles of a rectangle are right angles. Since a rectangle is a parallelogram, opposite angles are congruent and consecutive angles are supplementary.

Properties of Parallelograms Worksheet – Write on it! By definition, a parallelogram is a quadrilateral that has exactly two pairs of parallel sides. In this activity, you will investigate properties of a parallelogram. 1. Measure the four sides of the parallelogram below, using centimeters. What do you notice about the lengths of the opposite sides? Answer as a complete sentence.

Section 7.4 Properties of Special Parallelograms 433 The Venn diagram below illustrates some important relationships among parallelograms, rhombuses, rectangles, and squares. For example, you can see that a square is a rhombus because it is a parallelogram with four congruent sides. Because it has four right angles, a square is also a rectangle.

6-4 Properties of Special Parallelograms Check It Out! Example 2b CDFG is a rhombus. Find the measure. $m \angle GCH$ if $m \angle GCD = (b + 3)^\circ$ and $m \angle CDF = (6b - 40)^\circ$ $m \angle GCD + m \angle CDF = 180^\circ$ $b + 3 + 6b - 40 = 180^\circ$ $7b = 217^\circ$ $b = 31^\circ$ Def. of rhombus Substitute. Simplify. Divide both sides by 7.
