quality system is a documented, self-improving union of resources and activities that governs every aspect of a process that affects quality. What firms are required to register with QS-9000? Direct suppliers of production materials, parts, or key finishing services—and certain other suppliers—must register. What are the advantages or benefits of QS-9000 registration? It improves customer confidence, provides access to markets, improves competitive standing, and reduces supplier quality assurance program costs. What quality tools and techniques are mandated by QS-9000? QS-9000 requires the use of mistake-proofing methods, disciplined problem-solving methods, and

the use of cross-functional teams for decision making. What are some of the common perils and pitfalls to effective system implementation? Pitfalls you should avoid include trying to implement "from the bottom up," doing "just enough" to get registered, getting carried away with documentation, and springing the system on the work force all at once.

By mid-1996, over 10,000 companies in the United States had achieved ISO registration-a staggering jump from the 100 registered at the end of 1991. Why the explosive growth? For many, ISO registration acts as proof that the company has an outstanding and continuously

improving quality process. As registration continues to grow at a rate of more than 400 companies a month, it's clear that the ISO/QS phenomenon shows no sign of slowing down. To become ISO/QS-9000 registered, a company needs an effective plan. Because the average process can take 12 to 18 months, it's important to know exactly what steps need to be taken - from start to finish. And that's where this book comes in. *Passing Your ISO 9000/QS-9000 Audit* is a clearly written, step-by-step guide to passing the external audit and getting your company ISO/QS-9000 registered. *Passing Your ISO 9000/QS-9000 Audit* is ideal for "ISO champions" and "management

Cochin, India during December 28-31, 1996. The Conference was hosted by the Cochin University of Science and Technology, Cochin, India; and sponsored by the Institute for Improvement in Quality and Productivity (IIQP) at the University of Waterloo, Canada, the Statistics in Industry Committee of the International Statistical Institute (ISI) and by the Indian Statistical Institute. There has been an increased interest in Quality Improvement (QI) activities in many organizations during the last several years since the airing of the NBC television program, "If Japan can ... why can't we?" Implementation of QI methods requires statistical thinking and the utilization of statistical tools,

thus there has been a renewed interest in statistical methods applicable to industry and technology. This revitalized enthusiasm has created worldwide discussions on Industrial Statistics Research and QI ideas at several international conferences in recent years. The purpose of this conference was to provide a forum for presenting and exchanging ideas in Statistical Methods and for enhancing the transference of such technologies to quality improvement efforts in various sectors. It also provided an opportunity for interaction between industrial practitioners and academia. It was intended that the exchange of experiences and ideas would foster new

It is a step-by-step format with anecdotal references to actual occurrences from real experience in the auditing field.

Industrial development is essential to improvement of the

standard of living in all countries. People's health and the environment can be affected, directly or indirectly by routine waste discharges or by accidents. A series of recent major industrial accidents and the effect of pollution highlighted, once again, the need for better management of routine and accidental risks. Moreover, the existence of natural hazards complicate even more the situation in any given region. In the past effort to cope with these risks, if made at all, have been largely on a plant by plant basis; some plants are well equipped to manage environmental and health hazards, while others are not. Managing the hazards of modern technological systems has

become a key activity in highly industrialised countries. Decision makers are often confronted with complex issues concerning economic and social development, industrialisation and associated infrastructure needs, population and land use planning. Such issues have to be addressed in such a way that ensures that public health will not be disrupted or substantially degraded. Due to the increasing complexity of technological systems and the higher geographical density of punctual hazard sources, new methodologies and a novel approach to these problems are challenging risk managers and regional planners. Risks from these new complex technological

systems are inherently different from those addressed by the risk managers for decades ago.

In today's modernized world, new research and empirical findings are being conducted and found within various professional industries. The field of engineering is no different.
