This innovative Handbook explores the complexity of cultural, conceptual and definitional issues surrounding research into organisational culture, outlining the varied frameworks and theories that underpin the field.

These proceedings represent the work of researchers participating in the 17th European Conference on Research Methodology for Business and Management Studies (ECRM) which is being hosted this year by Università Roma TRE, Rome, Italy on 12-13 July 2018.

As Human Resource Development (HRD) research has developed, a growing variety of quantitative and qualitative data collection procedures and analysis techniques have been adopted; research designs now include mono, multiple and mixed methods. This Hand

Over the past two decades, there has been a shift of paradigm in public administration and public sector accounting around the world with the increasing emphasis on outcomes as opposed to inputs and outputs focus. Understanding of how government departments and agencies develop and implement outcomes-based approaches to their services and programs to strengthen public accountability, financial scrutiny and good governance worldwide is limited. Covering a selection of international practices on outcomes-based approaches to government departments, agencies and public higher educational institutions in developed economies, this comprehensive compilation provides an essential reading in the public sector accounting, accountability and performance management field. The contributions are grouped into three jurisdictions: Australasia, UK and Europe, and North America. It incorporates outcomes-based practices in public

services from advanced economies and will be of significant interest to global public sector regulators, consultants, researchers, and academic communities as well as academic researchers in public administration and development studies fields. The insights offered by a country-specific practice will also be useful to governments in other countries implementing similar systems and practices and facing similar socio-political environments. This book will also help to gain an understanding of the issues of government accountability from a management point of view as well as from a socio-political point of view.

Co-production and co-creation occur when citizens participate actively in delivering and designing the services they receive. It has come increasingly onto the agenda of policymakers, as interest in citizen participation has more generally soared. Expectations are high and it is regarded as a possible solution to the public sector's decreased legitimacy and dwindling resources, by accessing more of society's capacities. In addition, it is seen as part of a more general drive to reinvigorate voluntary participation and strengthen social cohesion in an increasingly fragmented and individualized society. "Co-Production and Co-Creation: Engaging Citizens in Public Services" offers a systematic and comprehensive theoretical and empirical examination of the concepts of co-production and co-creation and their application in practice. It shows the latest state of knowledge on the topic and will be of interest both to students at an advanced level, academics and reflective practitioners. It addresses the topics with regard to co-production and co-creation and will be of interest to researchers, academics, policymakers, and students in the fields of public administration, business administration, economics, political science, public management, political science service management, sociology and voluntary sector studies.

Since the early 1980s, researchers and practitioners in the organisational and management fields have presumed a link between organisational, or corporate, culture and organisational performance. Whilst many believe this exists, other authors have been critical of the validity of such studies. Part of this doubt stems from a reliance on measures of organisational performance that are based purely on financial measures of business growth. Using the construction industry as the subject of his research, Vaughan Coffey traces the development of the literature on organisational culture and business effectiveness and investigates the culture-performance link using a new and highly objective measure of company performance and an evaluation of organisational culture, which is largely behaviourally-based. Providing a theoretical contribution to the field, this work shows that various cultural traits appear to be closely linked to objectively measured organisational effectiveness. This book will be valuable to professionals and researchers in the fields of management

and public policy. It indicates directions for construction companies to develop and change, and in doing so strengthen their chances of remaining strong when opportunities for work might deplete and only the most successful companies will be able to survive.

This collection focuses on the real life experiences of conducting empirical research about families and relationships, with an emphasis on the actualities of doing research and the experiences of being a researcher.

This book provides a thorough review of tested qualitative methods often used in organization studies, and outlines the challenges and essential requirements of designing a qualitative research project. The methods examined include case studies, observation, interviewing and the repertory grid technique. By highlighting certain key 'rules' for carrying out qualitative research and describing issues that should be avoided, this second volume of *Qualitative Methodologies in Organization Studies* is essential reading for academics and researchers who wish to understand the current state of qualitative data gathering within organization studies. Those exploring organization studies will find this two-volume collection extremely valuable as it contains robust contributions from highly-skilled authors who are actively researching in this field.
