Like Schachter and Singer's theory [22], the core-affect theory postulates two stages in generating an emotion. The first is of arousal (with an added pleasure/displeasure dimension) and the second is of social construction. Like appraisal, social construction is of long standing in cognitive approaches to emotions.

The Cognitive Structure of Emotions by Andrew Ortony

Summary. In discussing the merits and dangers of using linguistic evidence, the last chapter introduced the notion of an emotion type. An emotion type is a distinct kind of emotion that can be realized in a variety of recognizably related forms. The example we gave was of the emotion type, fear, which can be manifested in varying degrees of intensity (marked in English by words such as {concern,} {fright,} {petrified,} and so on), and for which there can be various subtle shifts ...

Summary. As cognitive psychology established itself in the 1970s, it became increasingly apparent that it was a {cold} approach to cognition, and doubts began to arise as to whether or not it could provide the machinery necessary to account for affect and emotion. In 1981, Donald Norman identified the topic of emotion as one of twelve major challenges to cognitive science (Norman, 1981).

Preface - The Cognitive Structure of Emotions

Recent neurological studies indicate that the role of emotion in human cognition is essential; emotions are not a luxury. Instead, emotions play a critical role in rational decision-making, in perception, in human interaction, and in human intelligence. These facts, combined with abilities computers are acquiring in expressing and recognizing affect, open new areas for research.
