All 40 Species of Wild Cats and Where to See Them in the Wild
Supremely adapted for the kill, all cats are obligate carnivores; they survive only by preying upon other animals, and they have become one of evolution's most successful predatory lineages of mammals. Wild Cats of the World explores the spectacular Cat Family in unprecedented depth. Drawing on thousands of scientific papers and direct observations in the field, each species is profiled at length, covering all aspects of felid behaviour and ecology.

Did you know that European royalty once used cheetahs to hunt deer, or that caracals can capture birds by leaping six and a half feet straight up into the air from a standing start? Have you ever wondered whether domestic cats really do land on their feet when they fall, or how Canada lynx can stalk their prey in the winter without falling through the deep snow? Wild Cats of the World is a treasure trove of answers to questions like these, and many others, for anyone who's interested in learning more about the world's felids, including the ones with whom we share our homes. Mel and Fiona Sunquist have spent more than a decade gathering information about cats from every available source, many of them quite difficult to find, including scientific papers, descriptions of hunts, archeological findings, observations by naturalists and travelers, reports from government agencies, and newsletters from a wide variety of organizations. Weaving information from these sources together with their own experiences observing wild cats around the world, the Sunquists have created the most comprehensive reference on felids available. Each of their accounts of the 36 species of cat contains a description of the cat, including human interactions with it, as well as detailed data on its distribution, ecology and behavior, status in the wild, and efforts to conserve it. Numerous photographs, including more than 40 in full color, illustrate these accounts. Ranging from the two-pound black-footed cat to the five-hundred-pound tiger, and from the African serval with its satellite-ear to the web-footed fishing cat of Asia, Wild Cats of the World will fascinate and educate felid fans of any stripe (or spot).

Ranging from the largest - the Tiger to the smallest species - the Rusty-spotted Cat and Black-footed Cat, the world's wild cats are some of the most beautiful, ferocious and feared carnivores in the world. Wild Cats of the World provides a detailed account of each species of wild cat, examining their importance throughout history and the future of some of the most endangered breeds. Using stunning photography and magnificent colour plates by top wildlife artist Priscilla Barrett to depict each cat in detail, Wild Cats of the World examines the characteristics of all 38 species, as well as their history, distribution and current IUCN status.

The most comprehensive and user-friendly photographic field guide to the world's wildcats and hyenas From the Leopard Cat of Asia, the Black-footed Cat of Africa, and the Amur Tiger of Siberia to South America's Ocelots and North America's Bobcats, the wildcats known as felids are among the most fascinating and spectacular of all animals. This stunningly illustrated book is the most comprehensive and user-friendly guide to the world's felids and their often misunderstood relative, the hyenas. Covering and illustrating every species and subspecies, the guide features more than 150 superb full-color plates that incorporate more than 600 photographs and show species in similar poses for quick and easy comparison. Drawing on the latest taxonomy and research, the facing-page species accounts provide distribution maps, common and scientific names, and detailed information on key identification features, distribution, behavior, reproduction, similar species, habitat, conservation status, and where to observe each species. An ideal field companion for use anywhere in the world, the book will appeal to both casual nature enthusiasts and seasoned professionals. Covers 41 felids and 4 hyenas-every species and subspecies in the world Features more than 150 color plates incorporating more than 600 photos Depicts species in similar poses for quick and easy comparisons Provides key identification information in detailed, facing-page species accounts Uses the latest taxonomy Includes easy-to-read distribution maps and tips on where to observe each species

Presents information about the physical features, behavior, habitats, and geographical distribution of wild and feral cats throughout the world, and the dangers they face from humans and changes to their environment.

Portrait of the world's 37 species of wild cats.

This book examines the behavior, biology, and conservation of the more than 30 small wild cat species.

Looks at a variety of lions, tigers, bobcats, leopards, cheetahs, and pumas; describes their behavior, characteristics, and distribution; and looks at the forces threatening their extinction.

Provides essays and more than three hundred photogrpahs of tigers, leopards, lions, ocelots, and other wild cats that inhabit The Institute of Greatly Endangered and Rare Species (TIGERS), a wildlife preserve in Myrtle Beach, South Carolina.
