Proceedings of SPIE present the original research papers presented at SPIE conferences and other high-quality conferences in the broad-ranging fields of optics and photonics. These books provide prompt access to the latest innovations in research and technology in their respective fields. Proceedings of SPIE are among the most cited references in patent literature.

Oil is the lifeblood of the global economy, and its misuse carries the risk of heavy economic and environmental penalties. This book is a collection of essays bearing on economic growth and environmental concerns for a world that will continue to be dependent on oil throughout the next century. Topics include the outlook for petroleum demand and supply, the potential for alternatives to a petroleum-based economy, the costs of controlling automobile emissions, the environmental costs of moving oil by tanker and pipeline, and competition issues in the production and distribution of petroleum products. The wide range of topics reflects the many different ways in which petroleum and use affect the quality of our lives. The essays are the end results of an initiative by the University of California Energy Institute and reflect careful research into the costs and benefits of the petroleum economy. Together, they offer new insights into the critical task of living with oil, for today and for the future.

This unique book is the only recent summary presenting a comprehensive, up-to-date and detailed treatment of relay feedback theory, the use of relay feedback for process identification and the use of identified models for general control design in a single volume.

The number and complexity of health promotion programs continues to grow as professionals, the public, and policymakers embrace prevention and health education as essential elements of the nation's well being. Additionally, the scope of health promotion programs is increasing as globalization and shifting demographics (i.e. aging, immigration) expand the range of activities and initiatives underway. Unfortunately, while the need is great and growing, the requisite skills for managing these programs continue to have a mixed review. *Managing Health Education and Promotion Programs, Second Edition* specifically addresses management and leadership in health promotion programs. This book serves as a core text for students of public and community health, both at the graduate and undergraduate levels.

Accompanying small-format CD-ROM includes the entire text of the book and illustrations in searchable PDF format.
